

New in The RFID Shop

July 2016

Now available: Confidex Carrier Tough Slim

Confidex Carrier Tough Slim™ is the ideal tag for tracking plastic containers and plastic returnable transit items. It is designed to survive even the harshest environments and is almost immune to scratching and beating. Confidex Carrier Tough Slim™ endures repeated washings at high temperatures while still providing reliable automated real-time tracking.

HID SlimFlex™ range extended HF on-metal and mini white now available

HID Global® SlimFlex™ RFID tags are among the most advanced general purpose flexible tags available. The unique thermoplastic elastomer (TPE) housings – made from the same materials used worldwide to manufacture automobile pipes and hoses – tolerate repeated bending or torsion, while maintaining excellent performance characteristics.

The durable housing safeguards embedded electronics, even under harsh conditions. SlimFlex passive contactless transponders improve data collection speed and accuracy for logistics applications. Anti-collision functionality, fast data-rate communication and password data protection enable precise, reliable reading and updating of each tag's large user memory.

Omnikey: New lower prices for our range of reader boards

Our range of Omnikey reader boards offers system integrators a cost-efficient and flexible design-in solution for contactless applications. They are designed to be easily integrated into compact terminals or handheld devices and provide fast read rates for maximum data through-put. Field upgradeable firmware ensures that new designs are future-proof.
