

New in The RFID Shop

October 2016

TSS New release

HUR120BT

By popular demand, TSS have developed a handheld reader that is Bluetooth enabled. Based on their successful HUR120, this nifty device has everything that made it popular before and more!

Bluetooth capability provides now even more flexibility. Any Bluetooth enabled device such as your Smartphone or tablet will allow you to communicate with this reader.

And its long battery life, it works continuously for 10 hours without charging, offers unsurpassed reliability.

It still possesses its lightweight ergonomic shape and is just as easy to integrate as before.

TSS are one of our most successful suppliers. Established in 2011 in the Slovak Republic, they focus on making the integration of UHF RFID technology easier and more cost effective through the creation of user friendly and affordable devices.

They remain in close contact with their customers and aim to improve their products continuously by listening to requests and suggestions.

They started their business with two clever, straightforward and very reliable UHF RFID Readers: the **DUR120** and **HUR120**.

DUR 120 USB is ideal for USB desktop applications where high performance and advanced functionality are required.

Highlights:

- a **small** (11cmx11cm) easy-to-use UHF RFID desktop reader powered and controlled directly by a **USB interface**
- integrated antenna** for short- to medium- range applications
- ergonomic** shape
- flexible** mounting options

More recently TSS have added to their portfolio the **Gold Reader**

Highlights:

a simple **fixed low profile reader**
users can start reading tags and developing solutions **immediately**

communicates **via Low Level Reader Protocol**

LLRP ToolKit allows **easy development** of custom interfaces and software solutions

POE capability allows power to be delivered over properly-equipped local area networks, eliminating expensive AC wiring installation.
