

New in The RFID Shop

October 2017

New iDTRONIC NEO desktop readers now available in LF, HF and UHF!

The iDTRONIC Desktop Reader NEO is a cost-efficient plug and play RFID reader with integrated Keyboard Emulation (KEMU) and USB 2.0 interface. It enables the usage of RFID for a wide variety of applications in industry and commerce, telecom, banking or healthcare. The USB 2.0 interface connects the compact reader easily to any PC or device equipped with a USB port.

iDTRONIC's NEO Desktop RFID Reader is available in UHF (ETSI & FCC) and HF, as well as in an inexpensive LF read-only version. Keyboard Emulation is included in all versions.

Features:

- Integrated KEMU
- Modern design
- Compact size
- Cost-efficient
- USB plug & play
- Fast and easy integration
- Bi-color LED Signal

HID UHF Sample Tag Kit now in stock

Sample Kits are a wonderful way to get a choice selection of tags to test in your project, if you are not sure which type of tag is best.

Our HID UHF Sample Tag Kit puts together a representative selection of the wide range of UHF tags that HID have made available.

This sample kit comes in a carton box and each tag is in a labelled pouch indicating name and model number. An empty plastic pouch for the storage of the tags is shipped with. There also is a free USB stick with HID information material.

The content of the sample kit can vary slightly.

Generally it will contain samples of:

Bin Tag, Brick Tag, EpoxyDisc, ISO card, Keg Tag and a selection of Flex Tags, InLine Tags, IronTags, LinTags, UHF labels, Seal Tags and TapMark Tags.

All HID UHF tags meet RAIN® RFID standards.

**Just a reminder:
American Express is now accepted in The RFID Shop!**
