

Long Range Reader ISO15693 "EzScan LR" - SDK

EzScan ISO15693 Long Range Reader is a Read/Write device for ISO 15693 transponders (ISO18000-3). The Reader is very robust due to its Aluminium housing. An integrated LCD display makes operations easily accessible and the RS232 interface allows for a connection to a PC or Host.

The EzScan Development Kit is specially developed for the LR Reader and its accessories. It is a complete solution which includes a Software Development Kit (SDK) with drivers, demo applications and sample applications with full source code.

There are two different sets available allowing the customer to choose the best option for himself. The LR Reader Development Kit Version 1 contains one Reader and LR panel antenna, all cables, power supply. The LR Reader Development Kit Version 2 contains one Reader, set of two LR Evaluation Antennas power-supply, all cables and a power-splitter.
