

New in The RFID Shop

May 2018

New NFC department!

The RFID Shop now holds all NFC tags, cards and labels in one place for easier browsing

Near field communication (NFC) is a set of standards for smartphones and similar devices to establish radio communication with each other by touching them together or bringing them into close proximity.

The applications for NFC are numerous. It is used for payment, ticketing, access control, interactive advertising or asset tracking.

The RFID Shop holds a range of NFC products, including ISO cards, inlays and on-metal labels.

Do you want to know more about NFC? Read the Whitepaper here:
